

THE VIEW

Life sciences | December 2021

The pandemic has propelled the healthcare industry forward by a couple of decades. Accelerated digital transformation has given rise to a new breed of health-tech that is driving efficiency and improving patient outcomes. From digital twins in personalized medicine to the use of natural language processing (NLP) and artificial intelligence (AI) in electronic health records (EHRs), this month's newsletter summarizes the latest smart innovations in the industry, and tries to answer the omnipresent question: What's next?

[Digital twins in personalized medicine: From evolution to revolution](#)

Digital twin technology that can use a patient's clinical data in real-time to produce predictions of medical outcomes, is transforming the face of personalized medicine. Explore how. [>>](#)

[NLP: A game-changer for unstructured data in EHRs](#)

EHRs can rapidly digitize medical data, however challenges such as lack of standardization is hindering this system. Uncover how NLP technology is providing an efficient solution. [>>](#)

[How AI is optimizing the productivity of EHRs](#)

AI-enabled EHR systems allow clinicians to rapidly access, extract and electronically export patient data with minimal error. Here are 4 major ways AI is changing the game for EHRs. [>>](#)
